

Raised Floor Surface Cleaning

Preventing Business Disruption & Financial Loss

A preventative maintenance program that cleans the raised floor not only helps prevent contamination risks that can cause downtime, but helps improve efficiency and reliability of hardware. Contamination accumulates inside server cabinets and hardware over time through airflow that carries particulate from inside your facility. By cleaning the raised floor on a regular schedule you can ensure that contamination is prevented from building up in your equipment. Take every precaution to prevent downtime by removing contamination with our raised floor surface cleaning service.

ProSource provides specialized cleaning services and related products to data center facilities to help prevent the high cost of equipment related business interruptions caused by contamination build-up inside data centers. The cost of downtime is significant and should be prevented. Our solution has a minimal investment with a high return of cost avoidance, and is an industry recommended best practice.
