

Modular Infrastructure Containment Systems

Integrates Containment, Cable & Power Management, & Lighting

Polargy's modular infrastructure system integrates containment, cable and power management, and lighting to speed and simplify deployment. Polargy is modularizing the data center with infrastructure centered on the containment framework or chassis. The Floor Mounted Infrastructure (FMI™) solution combines the key components of containment, cable pathways, power bus-ways or pathways and, lighting into a single modular chassis. FMI™ allows owners to bring in capacity in phases, some at initial construction and some after commissioning depending on growth. This modular approach provides a rack and ceiling independent solution that saves on product costs and gives flexibility in adding capacity.

ProSource is an approved Polargy Containment Partner

Polargy is the leading provider of hot aisle and cold aisle containment solutions for new data center construction and retrofit projects. Polargy designs, manufactures and installs complete turnkey containment solutions including hot aisle and cold aisle containment, air flow accessories and server racks. Polargy's industry-leading data center containment solutions save energy and keep mission-critical environments cool across the globe.

The right choice for protecting data center assets
