One vendor for all your data center cleaning

DATA CENTER CLEANING

Comprehensive data center cleaning services for your entire facility with nationwide coverage for all your locations.

One vendor for all your data center cleaning

Critical cleaning

Removes contamination build-up in your facilities' data processing areas.

Custodial cleaning

Keeps customer and employee areas in your data center neat and clean.

Disinfection cleaning

Protects customers and employees by preventing the spread of infection.

Disaster cleaning

Responds to emergency needs for remediation and disinfection cleaning.

ProSource
we clean the cloud.

Expertise and Experience

For over 25 years, ProSource has partnered with data centers to minimize the risk of expensive downtime and helped keep their facilities looking great. With trained and skilled technicians servicing your facility, you can trust that every area of your data center is clean and protected. Plus, we offer nationwide coverage so you can rely on us for all your needs.

Comprehensive Plans

Our data center cleaning experts will help develop a comprehensive cleaning plan that fits your needs. First, we'll gather information about all your sites to understand your current situation and desired outcomes. Then, we'll design a program that standardizes cleaning procedures that comply with data center industry cleaning standards.

STEP 1

Discovery

First, our team will gather information about your data centers and conduct conversations between key stakeholders to define the program's goals.

STEP 2

Assessment

Next, we'll review your current situation compared to industry standards to determine a benchmark for needed improvements.

STEP 3

Program Design

We'll then design a specific cleaning program for your entire data center with services for critical, custodial, and disinfection cleaning.

STEP 4

Pricing Analysis

Next, our team will provide a pricing proposal based on all your locations with the agreed upon scope of work and finalize an agreement.

STEP 5

Implementation

Finally, our team will assign an implementation manager to keep the project on target and provide communication about critical steps and milestones.

DATA CENTER PRODUCTS

Improve and protect your data center with innovative products that increase efficiency and save money.

Manage cooling, power, and flooring

Cooling management

Bypass airflow grommets, blanking panels, directional airflow panels, and containment.

Power distribution

Custom-built power whips, rack power distribution units, and circuit breakers.

Monitoring solutions

Cloud-based software and wireless sensors that monitor cooling and power.

Flooring solutions

Refurbished access floor panels, high-capacity airflow grates, and directional airflow panels.
